For example, the patterns about statistical calculations was useful back in 2015, because of the lack of statistical functions in DAX. Since then, many new functions were introduced in DAX to compute the formulas that were explained in that chapter. There is no need for that content in 2020. We no longer provide code snippets.

Handling Different Granularities 10 min. read • DAX Patterns 2015 The Handling Different Granularities pattern is a technique to show and hide measures depending on the level of granularity of the underlying data. For example, you do not want to display a measure at the day level if it is a total for the month.

17 min. read • DAX Patterns 2015. The DAX time patterns are used to implement time-related calculations without relying on DAX time intelligence functions. This is useful whenever you have custom calendars, such as an ISO 8601 week calendar, or when you are using an Analysis Services Tabular model in DirectQuery mode.
